

Basic Occupational Health and Safety and Industrial Hygiene

I. Lombok, 1 - 3 December 2010

Overview

Managers and supervisors those with health and safety responsibilities need to prevent workplace injuries and illnesses and to develop a safety culture in the workplace. One of some program they need to develop is Industrial Hygiene program. Industrial Hygiene is the science of anticipating, recognizing, evaluating and controlling workplace conditions that may cause worker injury or illness. Industrial hygienists use environmental monitoring and analytical methods to detect the extent of worker exposure and employ engineering, work practice controls, and other methods to control potential health hazards. Industrial hygienists analyze, identify and measure workplace hazards or stressors that can cause sickness, impaired health or significant discomfort in workers through chemical, physical, ergonomic or biological exposures. Two roles of the Industrial hygienists are to spot those conditions and help eliminate or control them through appropriate measures.
